

DIRECTOR OF CENTRAL INTELLIGENCE
Intelligence Information Handling Committee
WASHINGTON, DC 20505

Coll 17-SR

ICS 4217-88
12 May 1988

MEMORANDUM FOR: Commander Robert Vorthman, USCG
Operational Computer Center.
United States Coast Guard
Governor's Island, New York 10004

SUBJECT: JMIE Testbed Requirements

1. In order to provide operationally useful information to JMIE testbed subscribers, it is desirable that the SEER data maintained on the testbed system be kept current. Your support is requested in providing periodic updates of SEER reporting for entry to the IBM 4341 JMIE computer in the OCC. Entries should consist of currently received detection, identification, boarding and last/next port SEER records in COMDTINST 16249.1 format. The updates should be provided on 9 track magnetic tapes in EBCDIC format at least once per day. Further, it is requested that you consider development of a mechanism to capture for JMIE data corrections entered into the SEER data base by your analysts.

2. Since testbed deployment is dependent upon implementation of a SEER update capability, it is requested that you coordinate with AMI representative, Mr. Robert Esoda, to accomplish development of the update capability by early June or soon thereafter. Your continued support of JMIE development and operations is greatly appreciated.
